District 11

15 People Killed in Traffic Crashes in District 11 Since January 2014

1,176 People Injured in Traffic Crashes in District 11 Since January 2014

Top Ten Most Dangerous Intersections

- Geneva Ave at Mission St^*
- Geneva Ave at San Jose Ave
- Sickles Ave at Alemany Blvd
- San Jose Ave at Alemany Ave at I-280*
- Geneva Ave at Naples St^*
- Congdon St at Alemany Blvd
- Geneva Ave at I-280
- Persia Ave at Mission St*
- San Jose Ave at Sagamore
- Alemany at Lawrence Ave^*

High-Injury Corridors

- Alemany Blvd^*
- Geneva Ave^*
- Junipero Serra
- Mission St*
- Ocean Ave
- San Jose Ave*

*Indicates significant permanent safety improvements have been made.
^Indicates significant permanent safety improvements are planned.

Method: Intersections and corridors listed had the highest total numbers of people injured and/or killed in crashes (this includes all crash victim types: pedestrian, cyclist, motorcyclist; motorist; passenger).

Source: Data from TransBASE as collected by SFDPH, SFMTA, and SFPD, as well as SFDPH’s most recent Vision Zero monthly summary reports.

Published January 21, 2021.
Basic Pedestrian Safety Improvements Add Up to Save Lives

**High-visibility continental crosswalks** increase the likelihood of a driver yielding to a pedestrian by **30-40%**.

40% of traffic fatalities in 2019 involved drivers making left turns according to SFMTA. At intersections in New York City with **left turn calming**, pedestrian injuries have decreased by **20%**.

**Leading pedestrian intervals**, which give pedestrians a head-start to cross before drivers get the green, can reduce pedestrian-vehicle collisions by as much as **60%**.

**Pedestrian safety zones** use paint and posts to create a buffer between vehicles and pedestrians. The zones shorten the crossing distance plus improve visibility for drivers and pedestrians. Drivers typically make turns **55%** slower. This is a cheap, quick way to do what a concrete bulbout does.

**Daylighting** reduces crashes by up to **30%** by creating clear sight lines at intersections.

**No turn on red** gives pedestrians and drivers their dedicated time, preventing dangerous conflict in the crosswalk. Drivers turning on red account for **20%** of traffic crashes (SFMTA).

**Accessible pedestrian signals** communicate WALK and DON'T WALK with non-visual signals for people who are blind or low-vision.
