District 2

**13 People** Killed in Traffic Crashes in District 2 Since January 2014

**1,373 People** Injured in Traffic Crashes in District 2 Since January 2014

**Top Ten Most Dangerous Intersections**
- Broadway at Van Ness Ave\(^\wedge\)
- Van Ness Ave at Bay St\(^\wedge\)
- Divisadero at Bush St
- Van Ness Ave at Sutter St\(^\wedge\)
- Van Ness Ave at California St\(^\wedge\)
- Presidio Ave at Pine St at Masonic St
- Franklin St at Lombard St
- Chestnut St at Van Ness Ave\(^\wedge\)
- Franklin St at Sutter St\(^\wedge\)
- Pine St at Van Ness Ave\(^\wedge\)

**High-Injury Corridors**
- Arguello* 
- California 
- Divisadero 
- El Camino Del Mar 
- Franklin 
- Gough 
- Lombard\(^\wedge\) 
- Pine 
- Van Ness\(^\wedge\)

*Indicates significant permanent safety improvements have been made.
\(^\wedge\)Indicates significant permanent safety improvements are planned.

**Method:** Intersections and corridors listed had the highest total numbers of people injured and/or killed in crashes (this includes all crash victim types: pedestrian, cyclist, motorcyclist; motorist; passenger).

**Source:** Data from TransBASE as collected by SFDPH, SFMTA, and SFPD, as well as SFDPH’s most recent Vision Zero monthly summary reports.

Published January 21, 2021.
Basic Pedestrian Safety Improvements Add Up to Save Lives

**High-visibility continental crosswalks** increase the likelihood of a driver yielding to a pedestrian by 30-40%.

40% of traffic fatalities in 2019 involved drivers making left turns according to SFMTA. At intersections in New York City with **left turn calming**, pedestrian injuries have decreased by 20%.

**Leading pedestrian intervals**, which give pedestrians a head-start to cross before drivers get the green, can reduce pedestrian-vehicle collisions by as much as 60%.

**Pedestrian safety zones** use paint and posts to create a buffer between vehicles and pedestrians. The zones shorten the crossing distance plus improve visibility for drivers and pedestrians. Drivers typically make turns 55% slower. This is a cheap, quick way to do what a concrete bulbout does.

**Daylighting** reduces crashes by up to 30% by creating clear sight lines at intersections.

**No turn on red** gives pedestrians and drivers their dedicated time, preventing dangerous conflict in the crosswalk. Drivers turning on red account for 20% of traffic crashes (SFMTA).

**Accessible pedestrian signals** communicate WALK and DON’T WALK with non-visual signals for people who are blind or low-vision.
