

District 1

16 People Killed in Traffic Crashes in District 1 Since January 2014

1,610 People Injured in Traffic Crashes in District 1 Since January 2014

Top Ten Most Dangerous Intersections

- Crossover Dr at Park Presidio Bypass Dr
- Fulton St at Park Presidio Blvd at Park Presidio Bypass Dr ■
- Arguello Blvd at Fulton St ♦
- Geary Blvd at Park Presidio Blvd ■
- 8th Ave at Fulton St ■
- 25th Ave at Geary Blvd ■
- Arguello Blvd at Balboa St at Turk Blvd ♦
- Cabrillo St at Park Presidio Blvd
- 6th Ave at Geary Blvd ■
- 3rd Ave at Geary Blvd ■
- Crossover Dr at MLK Jr Dr

High-Injury Corridors: 7

- Arguello (♦McAllister to Sacramento)
- Balboa
- California (♦Arguello to 18th)
- Fulton (♦Stanyan to La Playa)
- Geary (■Stanyan to 34th)
- Park Presidio
- Stanyan

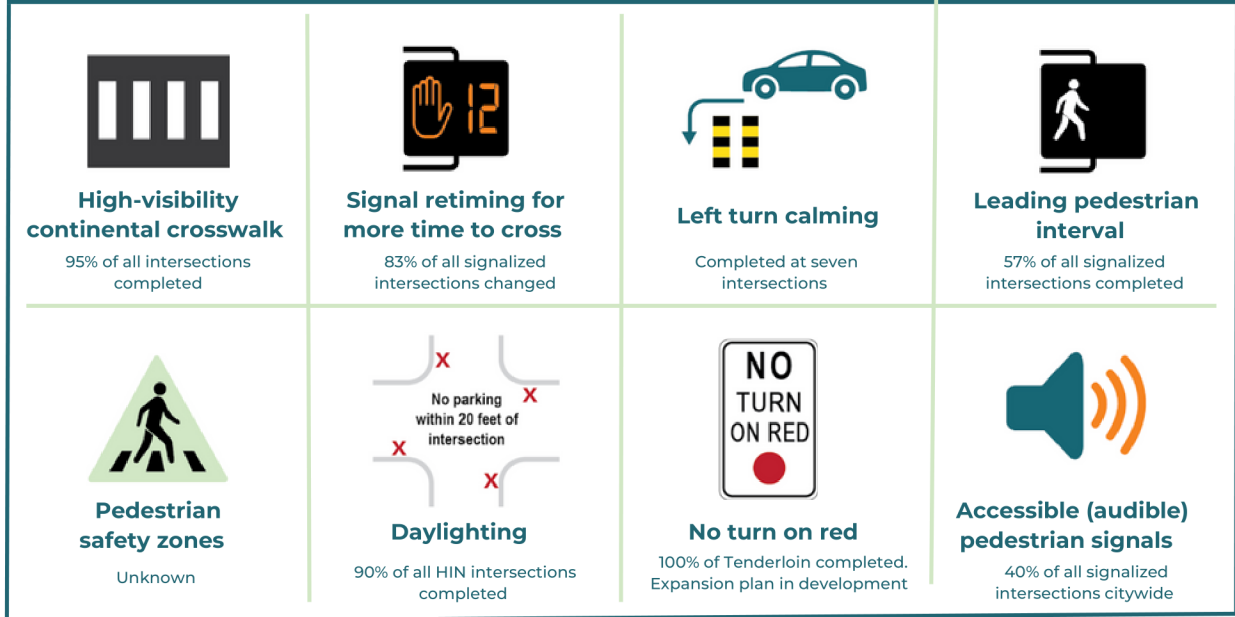

- ♦ Indicates significant safety improvements have been made.
- Indicates significant safety improvements are planned.

Method: Intersections and corridors listed had the highest total numbers of people injured and/or killed in crashes (this includes all crash victim types: pedestrian, cyclist, motorcyclist; motorist; passenger).

Source: Data from TransBASE as collected by SFDPH, SFMTA, and SFPD, as well as SFDPH's most recent Vision Zero monthly summary reports.

Published: February 2023. Injury and fatality totals through September 2022. Fatalities occurring on Supervisorial District border streets included in both District totals.

Status of Basic Pedestrian Safety Improvements on the High-Injury Network Citywide

Basic Pedestrian Safety Improvements Add Up to Save Lives

High-visibility continental crosswalks increase the likelihood of a driver yielding to a pedestrian by **30-40%**.

40% of traffic fatalities in 2019 involved drivers making left turns according to SFMTA. At intersections in New York City with **left turn calming**, pedestrian injuries have decreased by **20%**.

Leading pedestrian intervals, which give pedestrians a head-start to cross before drivers get the green, can reduce pedestrian-vehicle collisions by as much as **60%**.

Pedestrian safety zones use paint and posts to create a buffer between vehicles and pedestrians. The zones shorten the crossing distance plus improve visibility for drivers and pedestrians. Drivers typically make turns **55%** slower. This is a cheap, quick way to do what a concrete bulbout does.

Daylighting reduces crashes by up to **30%** by creating clear sight lines at intersections.

No turn on red gives pedestrians and drivers separate times to cross, preventing dangerous conflict in the crosswalk. Drivers turning on red account for **20%** of pedestrian traffic crashes (SFMTA).

Accessible pedestrian signals communicate WALK and DON'T WALK with non-visual signals for people who are blind or low-vision.
