

## District 11

**18 People** Killed in Traffic Crashes in District 11 Since January 2014

**1,837 People** Injured in Traffic Crashes in District 11 Since January 2014

### Top Ten Most Dangerous Intersections

- Geneva Ave at Mission St ■
- 19th Ave at Junipero Serra Blvd ■
- Alemany Blvd at Congdon St ♦
- Geneva Ave at San Jose Ave ■
- Alemany Blvd at Sickles Ave
- Mission St at Persia Ave ■
- Dorado Terrace at Jules Ave at Ocean Ave
- Mission St at Silver Ave ■
- Alemany Blvd at I-280 N onramp at Regent St at San Jose Ave
- Geneva Ave at I-280 N offramp

### High-Injury Corridors: 9

- Alemany (■Rousseau to Sickles)
- Geneva (■Prague to Mission)
- Junipero Serra
- Mission (■Geneva to Trumbull)
- Ocean
- Persia
- San Jose ♦ (■Geneva to Junipero Serra)
- Randolph
- Silver

♦ Indicates significant safety improvements have been made.

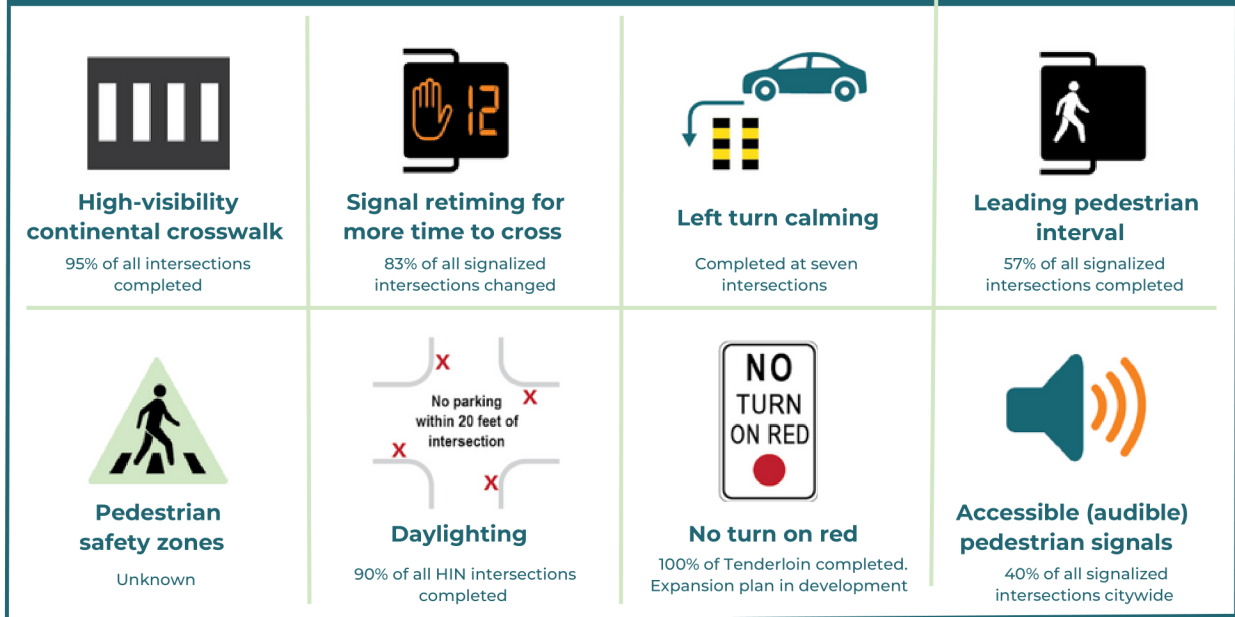

■ Indicates significant safety improvements are planned.

**Method:** Intersections and corridors listed had the highest total numbers of people injured and/or killed in crashes (this includes all crash victim types: pedestrian, cyclist, motorcyclist; motorist; passenger).

**Source:** Data from TransBASE as collected by SFDPH, SFMTA, and SFPD, as well as SFDPH's most recent Vision Zero monthly summary reports.

**Published:** February 2023. Injury and fatality totals through September 2022. Fatalities occurring on Supervisorial District border streets included in both District totals.

# Status of Basic Pedestrian Safety Improvements on the High-Injury Network Citywide

## Basic Pedestrian Safety Improvements Add Up to Save Lives

**High-visibility continental crosswalks** increase the likelihood of a driver yielding to a pedestrian by **30-40%**.

40% of traffic fatalities in 2019 involved drivers making left turns according to SFMTA. At intersections in New York City with **left turn calming**, pedestrian injuries have decreased by **20%**.

**Leading pedestrian intervals**, which give pedestrians a head-start to cross before drivers get the green, can reduce pedestrian-vehicle collisions by as much as **60%**.

**Pedestrian safety zones** use paint and posts to create a buffer between vehicles and pedestrians. The zones shorten the crossing distance plus improve visibility for drivers and pedestrians. Drivers typically make turns **55%** slower. This is a cheap, quick way to do what a concrete bulbout does.

**Daylighting** reduces crashes by up to **30%** by creating clear sight lines at intersections.

**No turn on red** gives pedestrians and drivers separate times to cross, preventing dangerous conflict in the crosswalk. Drivers turning on red account for **20%** of pedestrian traffic crashes (SFMTA).

**Accessible pedestrian signals** communicate WALK and DON'T WALK with non-visual signals for people who are blind or low-vision.
