

District 4

11 People Killed in Traffic Crashes in District 4 Since January 2014

1,110 People Injured in Traffic Crashes in District 4 Since January 2014

Top Ten Most Dangerous Intersections

- Crossover Dr at Martin Luther King Jr Dr
- 19th Ave at Lincoln Way at Crossover Dr ■
- 41st Ave at Chain Of Lakes Dr at Lincoln Way ■
- 19th Ave at Judah St ■
- 20th Ave at Lincoln Way ♦
- 34th Ave at Clearfield Dr at Sloat Blvd
- Sunset Blvd at Wawona St
- 19th Ave at Irving St ■
- Lake Merced Blvd at Sunset Blvd ■
- 25th Ave at Lincoln Way ■

High-Injury Corridors: 5

- 19th (■Junipero Serra to Lincoln)
- Judah
- Lincoln (■Arguello to Great Hwy)
- Sloat ♦ (■Skyline to Great Hwy)
- Taraval (■15th to Great Hwy)

♦ Indicates significant safety improvements have been made.

■ Indicates significant safety improvements are planned.

Method: Intersections and corridors listed had the highest total numbers of people injured and/or killed in crashes (this includes all crash victim types: pedestrian, cyclist, motorcyclist; motorist; passenger).

Source: Data from TransBASE as collected by SFDPH, SFMTA, and SFPD, as well as SFDPH's most recent Vision Zero monthly summary reports.

Published: February 2023. Injury and fatality totals through September 2022. Fatalities occurring on Supervisorial District border streets included in both District totals.

Status of Basic Pedestrian Safety Improvements on the High-Injury Network Citywide

Basic Pedestrian Safety Improvements Add Up to Save Lives

High-visibility continental crosswalks increase the likelihood of a driver yielding to a pedestrian by **30-40%**.

40% of traffic fatalities in 2019 involved drivers making left turns according to SFMTA. At intersections in New York City with **left turn calming**, pedestrian injuries have decreased by **20%**.

Leading pedestrian intervals, which give pedestrians a head-start to cross before drivers get the green, can reduce pedestrian-vehicle collisions by as much as **60%**.

Pedestrian safety zones use paint and posts to create a buffer between vehicles and pedestrians. The zones shorten the crossing distance plus improve visibility for drivers and pedestrians. Drivers typically make turns **55%** slower. This is a cheap, quick way to do what a concrete bulbout does.

Daylighting reduces crashes by up to **30%** by creating clear sight lines at intersections.

No turn on red gives pedestrians and drivers separate times to cross, preventing dangerous conflict in the crosswalk. Drivers turning on red account for **20%** of pedestrian traffic crashes (SFMTA).

Accessible pedestrian signals communicate WALK and DON'T WALK with non-visual signals for people who are blind or low-vision.
